

PB-116

Zinc Plated Solid Shafts

Notice Date: August 3, 2016

OVERVIEW

Product Component	Solid shaft
Effective Date	August, 2016
Overview	Zinc plated cold roll shafts will become standard for all 1" and 1-1/4" keyed solid shafts used for sectional and rolling steel products.

FEATURES & BENEFITS

Durability	Zinc plating provides increased protection against rusting.
Handling	Handling of Zinc plated shafts is much cleaner.
Appearance	Zinc plating provides a finished look and blends with galvanized components used on the rest of the door.

LOGISTICS

Timing	Zinc plated shafts will start being shipped with the door package in mid-August.
Transition	The transition will occur over several weeks as oiled shaft inventory in the various sizes and lengths is depleted. Orders will be monitored during the transition period to avoid mixing shaft types on orders with the same job name.
